Hum. Genet. 89:377-380(1992).

-!- FUNCTION: As an inhibitor of cysteine proteinases, this protein is thought to serve an important physiological role as a local regulator of this enzyme activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TISSUE SPECIFICITY: Expressed in highest levels in the epididymis, vas deferens, brain, thymus, and ovary and the lowest in the submandibular gland.

DISEASE: Defects in CST3 are a cause of hereditary cerebral hemorrhage with amyloidosis (HCHWA) [MIM:105150]; also known as cerebral amyloid anglopathy (CAA) or cerebroarterial amyloidosis cerebral is characterized by a thickening of the cerebral arteries walls with deposition of material with the

-!- FUNCTION: As an inhibitor of cysteine proteinases, this protein is thought to serve an important physiological role as a local regulator of this enzyme activity.
-!- SIMILARITY: Belongs to the cystatin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                         -!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Proximal caput region of the epididymis. Lower expression in the testis. Within the testis it is localized to the elongating spermatids, whereas within the epididymis it is exclusively synthesized by the proximal caput epithelium.
-!- SIMILARITY: Belongs to the cystatin family.
                                                                                                                                                                        "The DNA sequence and comparative analysis of human chromosome 20.";
Nature 414:865-871(2001).
-i- FUNCTION: Performs a specialized role during sperm development and

                                                                                                                                                                                                                                                                                                                      expression in the testis. Within the testis it is localized to the elongating spermatids, whereas within the epididymis it is elongating spermatids, whereas within the epididymis it is exclusively synthesized by the proximal caput epithelium.

-INDUCTION: Testicular factors or hormones other than androgens present in the testicular fluid may be involved in the regulation of CRES gene expression.

-I SIMILMRITY: Belongs to the cystatin family.
                                                                                               "The CRES gene: a unique testis-regulated gene related to the cystatin family is highly restricted in its expression to the proximal region of the mouse epididymis.";
                                                                                                                                                                                            Mol. Endocrinol. 6:1653-1664(1992).
-!- FUNCTION: Performs a specialized role during sperm development and maturation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                POTENTIAL.

Oystatin S precursor - human

NyAlternate names: cystatin SA-III; salivary acidic protein-1

C;Species: Homo sapiens (man)

C;Species: Homo sapiens (man)

C;Date: 25-Feb-1885 #sequence revision 08-Feb-1996 #text change 16-Jul-1999

C;Accession: S17667; S16500; A01272; A29603; S19280; A56508

R;Bobek, L.A.; Aguirre, A.; Levine, M.J.

Cystatin S precursor - rat
Cispecies: Rattus norvegicus (Norway rat)
Cipate: 17-Jul-1992 #sequence_revision 17-Jul-1992 #text_change 16-Jul-1999
C;Accession: JQ1470; A31891; $05252; $15132

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 6, Application US/09941314

Sequence 6, Application US/09941314

Patent No. US20020142396A1

GENERAL INFORMATION:

APPLICANT: ZymoGenetics, Inc.

TITLE OF INVENTION: Mammalian Cystatin-8 and Its Use to

TITLE OF INVENTION: Inhibit Cancer Procoagulant Protein

FILE REFERENCE: 00-81PC

CURRENT APPLICATION NUMBER: US/09/941,314

CURRENT FILING DATE: 2001-08-29

PRIOR APPLICATION NUMBER: 60/230,230

PRIOR PAPLICATION NUMBER: 60/230,230

NUMBER OF SEQ ID NOS: 19

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 6

LENTH: 36
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GENERAL INFORMATION:
